## SPECIFICATIONS

**General.** There shall be furnished a No. .... Design No. 2 Sturtevant Monogram Fan. It shall be made (single or double) ... inlet, single width (right or left) ... hand, ... discharge and have full housing. The outlet shall be ... inches diameter, and the inlet ... inches diameter. The total height of the fan housing should be ... inches, the width and direction of shaft ... inches, and the length transverse to shaft ... inches. The fan shall have a capacity of ... cubic feet per minute against a resistance of ... inches water gauge either at the inlet or at the outlet (or at both taking the sum), and shall operate at approximately ... R. P. M., requiring approximately ... B. H. P.

**Housing.** The housing shall be of spiral form constructed of cast iron, and made in two halves bolted together. On the double inlet fans, outlets shall be fitted with an expanding outlet. Exhausters shall have a collar cast with the casing to facilitate connection to suction pipe.

**Wheels.** Blades of wheel shall be made of refined steel plate, flanged and riveted to the side plates, which are also to be made of refined steel plate in one piece carefully cut and pressed to shape. Hub shall be made in size No. 0000 of cast composition; sizes No. 00 to No. 5 inclusive of malleable iron; sizes No. 6 to No. 10 inclusive of cast iron having cast integral with it and radiating from it steel arms of T-sections. Hub shall be accurately bored and fitted to the shaft. At the outer ends of the arms, steel blades are to be securely riveted. Wheel shall be carefully balanced.

**Bearings.** The bearings should be of the chair box type provided with suitable means for supplying continuous lubrication. They shall be of large diameter and built extra long to give ample bearing support and shall be lined with best quality babbitt containing upwards of 85 per cent. tin, bored and scraped to exact size.

**Shaft.** The shaft shall be made from a steel forging, and after the keyways are cut, it shall be accurately turned and ground.

## **Monogram Fan and Exhauster—Design 2**

### **EXPLANATION OF TABLES**

The general explanation of tables found in the front of this book applies to these tables.

Capacities of single inlet fans and of double inlet fans smaller than No. 2 are measured as described in the general explanation.

Capacities of double inlet fans in sizes 2 to 10 are measured in a pipe of the same area as the large end of the expanded outlet.

## Monogram Fan — Design 1

## STEEL PRESSURE BLOWER—DESIGN 2

### SPECIFICATIONS

**General.** There shall be furnished a number.....Design No. 2. Sturtevant Steel Pressure Blower which shall be made double inlet, single width.....hand.....discharge and to have full housing. Fan shall be supplied with outlet.....inches diameter. Total height of fan housing shall be approximately.....inches, width of fan in the direction of the shaft approximately.....inches, length traverse to the shaft approximately.....inches. Fan shall have capacity of.....cubic feet of free air per minute against a resistance of.....inches of water at the fan outlet, when air is supplied freely to the inlet. Fan shall operate at approximately.....R. P. M. requiring approximately.....H. P.

**Housing.** Housing shall be of spiral form constructed of cast iron made in two halves, flanged and securely bolted together. These shall be split and planed at right angles to the shaft. Fan shall be supported by heavy cast-iron feet cast integral with fan casing. Fan casing shall be supplied with bearing brackets cast integral with the casing, excepting in the No. 10 size in which bearing brackets may be bolted on.

**Bearings.** Bearings shall be of the chair box type provided with suitable means for supplying continuous lubrication; shall be large diameter and extra long to give ample bearing support; shall be lined with best quality babbit containing upwards of 85 per cent. tin, bored and scraped to the exact size.

**Shaft.** Shaft shall be made of steel forging carefully turned, and after keyways are cut shall be accurately ground and polished.

**Wheels.** Blades of the blast wheel shall be made of refined steel plate, flanged and riveted to the side plates each of which shall also be made of refined steel plate, in one piece. Hub shall be made of cast composition for sizes No. 0000; and of malleable iron for sizes No. 00 to No. 5.

On sizes No. 6 to No. 10, hub shall be made of cast iron having cast integral with it and radiating from it steel arms with T section. Hub shall be accurately bored and fitted to shaft; to the outer end of the arms, steel blades shall be securely riveted. Wheels shall be carefully balanced.

## EXTRA HEAVY GAS BLOWER — DESIGN 2

### SPECIFICATIONS

**General.** There shall be furnished a number.....Design No. 2 Sturtevant Extra Heavy Gas Blower which will be made double inlet, single width.....hand.....discharge; and full housing. Fan shall be supplied with expanding outlet.....diameter at the discharge end. Total height of the fan housing shall be approximately.....inches; the width of the fan in direction of shaft approximately.....inches; length traverse to the shaft approximately.....inches. The Fan shall have a capacity of.....cubic feet of free air per minute against a resistance of.....inches water gauge, at the outlet, when air is supplied freely to the inlet. Fan shall operate approximately.....R. P. M., requiring approximately.....B. H. P.

**Housing.** Housing shall be of spiral form constructed of cast iron, made in two halves, flanged and securely bolted together, casing to be split on a plane at right angles to the shaft. Fan to be supported by heavy cast-iron feet, cast integral with the fan casing. Fan casing shall be supplied with machined foundation pieces to which the bearing brackets shall be securely bolted.

**Bearings.** The Bearings shall be of the chair box type provided with suitable means for supplying continuous lubrication. They shall be of large diameter and built extra long to give ample bearing support and shall be lined with best quality babbitt containing upwards of 85 per cent. tin, bored and scraped to exact size.

**Shaft.** Shaft shall be made from a steel forging, carefully turned and after keyways are cut, shall be accurately ground and polished.

**Wheels.** The blades of the blast wheel shall be made of refined steel plate, flanged and riveted to the side plates which shall be made of refined steel plate in one piece, carefully cut and pressed to shape. Hub shall be made in sizes 4 and 5 of malleable iron. On sizes 6, 7, 8, 9, and 10, hub shall be made of cast iron having cast integral with it and radiating from it steel arms of T section. Hub shall be accurately bored and fitted to shaft; at the outer end of the arms, steel blades shall be securely riveted. Wheels shall be carefully balanced.

# EXTRA HEAVY GAS BLOWER—DESIGN 4

## SPECIFICATIONS

**General.** There shall be furnished a number .....Design 4 Sturtevant Extra Heavy Gas Blower which shall be made double inlet, single width..... hand.....discharge and have full housing. Blower shall be supplied with expanded outlet .. inches diameter at the discharge end. Total height of fan housing shall be approximately.....inches; width of fan in the direction of the shaft approximately..... inches; length transverse to the shaft approximately..... inches. Blower shall have capacity of..... cubic feet of free air per minute against resistance of..... inches water gauge at the outlet when air is supplied freely to the inlet, and it shall operate at approximately..... R. P. M., requiring approximately..... B. H. P.

**Housing.** The housing shall be of spiral form constructed of cast iron and made in two halves, flanged and securely bolted together. These shall be split in a plane at right angles to the shaft. Housing shall be reinforced by heavy strengthening ribs running from the centre flange to circular reinforcing ribs concentric with the inlets. Housing shall be convertible and drilled so that the fan can be arranged for in any one of the eight different discharges and for either right or left hand.

**Bearings.** The bearings shall be of the spherical seated self-aligning type provided with split bearing sleeves of suitable length and size to give ample bearing support. Bearing sleeves shall be mounted in oil-tight and dust-tight housing, and provided with suitable sight gauge for determining the oil level. Bearings shall be thoroughly and continuously lubricated by means of oil rings. Bearings shall be provided with thrust collars which also act as oil throwers to catch and return to the oil reservoir any oil tending to creep along the shaft. Bearings shall be lined with best quality babbitt metal, containing upwards of 85 per cent. tin, bored, and scraped to exact size. Bearings shall be supported on rigid cast-iron pedestal which also supports the fan housing.

**Shaft.** Shaft shall be made of steel forging carefully turned and after the keyways are cut, shall be accurately ground and polished. Shaft shall be tapered to give ample strength where the wheel is mounted, and to reduce the size through the bearing to prevent excessive bearing speed.

**Wheels.** Blades of blast wheel shall be of refined steel plate; flanged and riveted to the side plates which shall also be made of refined steel plate in one piece, carefully cut and pressed to shaft. Blades shall be securely riveted to T-arms of spider. Spider shall consist of a heavy cast-iron hub, having tapered steel T-arms cast integral with it and radiating from it. Hub shall be accurately bored and fitted to shaft. There shall be a steel reinforcing ring securely riveted to the inlets of the wheel. Wheel shall be carefully balanced.

### Single Width

**When Receiving Air at 65° F and Density .075 lbs. per cubic foot Against Continuously Maintained Resistances**

[illegible]

## Double Inlet

### No. 10 Extra Heavy Gas Blower—Designs 2, 3, 4 and 5—Con.

## Single Width

**When Receiving Air at 65° F and Density .075 lbs. per cubic foot Against Continuously Maintained Resistances**

[illegible]

**EXTRA HEAVY GAS EXHAUSTERS  
OR BOOSTERS**

**Cast Iron Fan Type**

**Design 2**

**Dimensions, Capacities, Horse Powers**

## Extra Heavy Gas Exhauster or Booster—Design 2

Gas Boosters of Sizes 00, 0 and 1, made as above—Design 2, Form M

Gas Exhauster—Design 2, Form P

## Extra Heavy Gas Exhauster or Booster—Design 2

No. 7 Gas Booster—Design 2, Form M

Stuffing Box used on  
Sturtevant Gas Exhauster and Booster

## EXTRA HEAVY GAS EXHAUSTER—DESIGN 2, FORM “M”

### SPECIFICATIONS

**General.** There shall be furnished a number ..... Design 2 Form M Sturtevant Fan Type Gas Exhauster, single inlet, single width, ..... hand ..... discharge, full housing. Total height of the exhauster housing shall be approximately ..... inches; width of the exhauster in direction of the shaft approximately ..... inches; length transverse to the shaft approximately ..... inches. Exhauster shall have capacity of ..... cubic feet of gas per minute measured at atmospheric pressure, when handling gas, specific gravity of ..... as, assuming the specific gravity of air as 1, against a total resistance of ..... inches of water gauge, either at the inlet or at the outlet (or at both, taking the sum). Exhauster shall operate at approximately ..... R. P. M., requiring approximately ..... horsepower.

**Housing.** Housing shall be of spiral form constructed of cast iron, made in two halves, flanged and securely bolted together. Casing shall be split on a plane, at right angles to the shaft. Exhauster shall be supported by heavy cast-iron feet cast integral with the fan casing. Outlets shall be ..... inches internal diameter and shall be flanged and drilled to fit standard gas pipe. Inlets also shall be flanged, drilled, and tapped to fit standard gas pipe. Housing shall be provided with foundation pieces which are to be machined and with bearing brackets which shall be securely bolted to the side of the casing.

**Bearings.** The bearings shall be of the chair box type, provided with suitable means for supplying continuous lubrication. They shall be of large diameter and built extra long to give ample bearing support; and shall be lined with best quality babbit metal containing upwards of 85 per cent. tin, bored and scraped to exact size.

**Shaft.** Shaft shall be made from a steel forging carefully turned, and after keyways are cut, shall be accurately ground and polished.

**Stuffing Boxes.** Fan shall be provided with stuffing boxes where the shaft passes through the fan casing on the side opposite the inlet. This stuffing box shall be provided with suitable packing, and shall be so designed that packing may be thoroughly lubricated.

**Wheels.** The blades of the blast wheel shall be made of refined steel plate, flanged and riveted to the side plates, which shall also be made of refined steel plate in one piece carefully cut and pressed to shape. Hub shall be made for sizes 3 and 5 of malleable iron, and for sizes 7, 9, and 11 of cast iron with steel T-arms. Hub shall be accurately bored and fitted to the shaft. Wheel shall be carefully balanced.

# EXTRA HEAVY GAS EXHAUSTER—DESIGN 2 FORM “P”

## SPECIFICATIONS

**General.** There shall be furnished a number ..... Design 2 Form P Sturtevant Fan Type Gas Exhauster, single inlet, single width, ..... hand ..... discharge, full housing. Total height of the fan housing shall be approximately ..... inches; width of the fan in direction of the shaft approximately ..... inches; length transverse to the shaft approximately ..... inches. Exhauster shall have capacity of ..... cubic feet of gas per minute measured at atmospheric pressure, when handling gas, specific gravity of ..... as compared to air at specific gravity 1, against a total resistance of ..... inches of water gauge, either at the inlet or at the outlet (or at both taking the sum). Exhauster shall operate at approximately ..... R. P. M., requiring approximately ..... horsepower.

**Housing.** Housing shall be of spiral form constructed of cast iron, made in two halves, flanged and securely bolted together. Casing shall be split on a plane, at right angles to the shaft. Fan shall be supported by heavy cast-iron feet cast integral with the fan casing. Outlet shall be ..... inches internal diameter, and shall be flanged and drilled to fit standard gas pipe. Inlets also shall be flanged, drilled and tapped to fit standard gas pipe. Housing shall be provided with foundation pieces which are to be machined and to which shall be securely bolted bearing brackets, which are to extend to the same level as the feet and be provided with bolt holes.

**Bearings.** The bearings shall be of the chair box type provided with suitable means for supplying continuous lubrication. They shall be of large diameter and built extra long to give ample bearing support, and shall be lined with best quality babbit metal containing upwards of 85 per cent. tin, bored and scraped to exact size.

**Shaft.** Shaft shall be made from a steel forging carefully turned, and after keyways are cut, shall be accurately ground and polished.

**Stuffing Boxes.** Fan shall be provided with stuffing boxes where the shaft passes through the fan casing on the side opposite the inlet. This stuffing box shall be provided with suitable packing and shall be so designed that packing may be thoroughly lubricated.

**Wheels.** The blades of the blast wheel shall be made of refined steel plate, flanged and riveted to the side plates which shall also be made of refined steel plate in one piece carefully cut and pressed to shape. Hub shall be made in size 4 of malleable iron, and for sizes 6, 8, and 10 of cast iron having cast integral with it and radiating from it steel arms of T-section. Hub shall be accurately bored and fitted to shaft. To the outer end of the arms, the steel blades should be accurately riveted. Wheel shall be carefully balanced.

## **Extra Heavy Gas Exhausters or Boosters Cast Iron Fan Type—Design 2**

### **EXLPANATION OF TABLES**

The capacities of these fans are based upon gas weighing .045 lbs. per cubic foot.

Other than the above exception the general explanation of tables at the front of this book applies.

Single  
Inlet

# Extra Heavy Gas Exhauster or Booster—Design 2, Form M

Single  
Width

# READY-TO-RUN VENTILATING SET

## SPECIFICATIONS

**General.** There shall be furnished a No..... Sturtevant Ready-to-Run Ventilating Set. It shall be made single inlet, single width, and be reversible so that any discharge can be secured. The wheel shall be not less than.....inches diameter, .....inches wide. The outlet shall be.....inches diameter, and the inlet..... inches diameter. The total height of the fan housing shall be.....inches, the width in direction of the shaft .....inches, and the length transverse to shaft..... inches. The fan shall have a capacity of.....cubic feet per minute against a resistance of.....inches water gauge either at the inlet or at the outlet (or at both, taking the sum) and shall operate at approximately .....R. P. M., requiring approximately..... B. H. P.

**Housing.** The housing shall be of pressed steel and supported from the motor housing.

**Wheel.** The blades of the wheel shall be spooned with spherical depressions to efficiently handle the air. The wheel shall be overhung on the extended motor shaft.

**Motor.** The electric motor shall be of the Sturtevant UV Type, and shall meet all the requirements of the American Institute of Electrical Engineers. The motor shall be supported by a cast-iron base of sufficient stability, so that fan will stand upright without other support.

The Outlet Can be Turned to Discharge in Any Direction.  
Switch Has Several Positions

Electric Heat Blower—Note Inlet and Heating Coils

# STURTEVANT ELECTRIC HEAT BLOWER

## SPECIFICATIONS

**General.** There shall be furnished a No..... Sturtevant Electric Heat Blower to consist of a Sturtevant size..... Ready-to-Run Ventilating Set with heating element clamped over the outlet. The set shall be so designed that the outlet can be turned around to discharge air in any direction.

**Heating Elements.** The heating element shall consist of an aluminum shell containing heating coils of high-grade resistance wire wound on porcelain cylinders.

**Motors.** The motor shall be of the Sturtevant UV Type, size....., frame to be of laminated steel with distributed field winding, and provided with S. K. F. self-aligning ball bearings.

**Base.** The set shall be provided with a base so designed that there will be no danger of tipping. On the base a switch shall be provided to control the heating elements so that air of different temperatures can be secured.

## Electric Forge Blowers

Electric Forge Blower.

Electric Forge Blower in Use.

## **FORGE BLOWER**

### **SPECIFICATIONS**

There shall be furnished a Sturtevant Forge Blower driven by an Electric Motor and built to operate on . . . . . current, . . . . . volts, . . . . . cycles, . . . . . phase. The wheel shall be overhung on the extended motor shaft, and shall be encased in a pressed steel casing made in two halves, flanged and bolted together. The outlet shall be arranged for connection to delivery pipe. There shall be provided a base sufficiently large so that the set will stand upright without other support.

# **ELECTRIC DUST BLOWERS**

**Dimensions, Capacities, Horse Powers**

## Electric Dust Blower

Electric Dust Blower.

Electric Dust Blower in Use.

## DUST BLOWER

### SPECIFICATIONS

**General.** There shall be furnished a Sturtevant Dust Blower to consist of an aluminum casing and fan wheel driven by an Electric Motor and built to operate on.....current,.....volts, .....cycles, .....phase.

The set shall have a base large enough so that the apparatus will be perfectly stable without other support. The motor shall be supported from the blower casing.

There shall be provided 12 feet of flexible rubber hose, 1½ inches inside diameter to be attached to the outlet of blower. The hose shall be fitted with an aluminum blowing nozzle 10 inches long. Twenty feet of electric light cord with plug attachments shall also be provided.

# **CONE FANS**

**Dimensions, Capacities, Horse Powers**

## Cone Fan

Cone Fan

## CONE FAN

### SPECIFICATIONS

**General.** There shall be furnished a Sturtevant Cone Fan of wheel diameter.....inches.

The fan shall have a capacity..... cubic feet per minute against a resistance of .....inches water gauge when operating at approximately..... R. P. M., and requiring approximately ..... B. H. P.

**Wheel.** The floats of the wheel shall be securely held between a back plate supported by a cast-iron cone keyed to the shaft, and an annular front plate. The floats shall be curved in the direction opposite to the rotation of the wheel.

**Shaft.** The shaft shall be made of a steel forging and after the keyways are cut shall be turned and ground.

**Bearings.** The bearings shall be of the brush oiling type, split lengthwise along the center of the shaft and supported by chairs so as to be self-aligning. Bearings shall be lined with the best quality babbit, containing upwards of 85 per cent. tin, bored and scraped to exact size.

**Pulley.** The fan shall be equipped with a pulley.....inch diameter, and with face.....inches wide.

## CONE FAN

### EXPLANATION OF SPECIFICATION REQUIREMENTS

It will be noted that the Cone Fan has no housing, and is generally used in connection with a plenum chamber. The backwardly curved floats give very quiet operation, and the cone fan is therefore very desirable where this is a factor.

## **Cone Fan**

### **EXPLANATION OF TABLES**

The fans of this type have no casing and deliver directly into a plenum space usually of considerable size. The capacities are measured from a pipe discharging from the room into which the fan delivers. The maintained resistance is the static pressure in the room.

For further information refer to the general explanation of tables in the front of the book,

## Turbo Undergrate Blower—Design 3

Sturtevant Turbo Undergrate Blower — Design No. 3  
This machine may be equipped with more hand controlled nozzles if desired

# **TURBO-UNDERGRATE BLOWER**

## **Design 3**

### **SPECIFICATIONS**

**General.** There shall be furnished a No.....Design 3 Sturtevant Turbo-Undergrate Blower. The fan wheel shall be not less than.....inches diameter, and the inside diameter of the thimble shall be.....inches. Blower shall have a capacity of ..... cubic feet per minute against a resistance..... inch water gauge and shall operate at approximately..... R. P. M., and require approximately..... B. H. P.

**Thimble.** The thimble shall be of cast iron and shall have the end at which the air enters curved so as to offer no sharp angle to the entering air.

**Fan Wheel.** The fan wheel shall be of the disc type of sheet aluminum blades, riveted to a bronze hub with hard-drawn copper rivets. The hub shall be accurately machined, and the wheel shall be overhung on the extended turbine shaft.

**Turbine.** The turbine shall be of the single pressure multi-velocity type, and the casing shall be provided with inspection holes fitted with removable plugs. The wheel shall be one solid forging with the buckets milled in the rim. Three reversing buckets shall be cast in one piece with the nozzle. Individual hand-operated nozzle control valves shall be provided. The set shall be furnished with a floating stuffing box, and on the shaft outside the stuffing box there shall be a water deflector.

**Bearings.** The bearings shall be oil-ring lubricated with journal bushings of bronze, and wrought-iron overflows. Oil gauges shall be provided.

## **Turbo-Undergrate Blower**

### **EXPLANATION OF TABLES**

These blowers are primarily intended to create a pressure in the ash pit of boilers or other furnaces.

The capacities are, therefore, measured with blower discharging into a closed plenum space, the maintained resistance being the static pressure in that space.

For further information as to the basis of the following tables see the general explanation of tables at the front of this book.

## Sturtevant Electric Propeller Fan

Sturtevant Electric Propeller Fan

## Sturtevant Pulley Propeller Fan

Sturtevant Pulley Propeller Fan

# **STURTEVANT PROPELLER FAN**

## **SPECIFICATIONS**

There shall be furnished a Sturtevant.....  
inch Propeller Fan. The total length of the fan in  
the direction of the shaft shall be.....inches  
and the total overall diameter.....inches. The  
fan shall have a capacity of.....cubic feet  
per minute and shall operate at approximately  
..... R. P. M., requiring approximately.....  
B. H. P.

The thimble shall be made of cast iron in sizes  
up to and including 42-inch and of steel plate in  
larger sizes. There shall be bolted to the flange  
of the thimble three arms to support the motor  
and the fan wheel, which latter shall be overhung  
on the extended motor shaft.

Motor shall be built to operate on .....cur-  
rent, .....volts, .....cycles, .....  
phase.

## **Sturtevant Propeller Fan**

### **EXPLANATION OF TABLES**

These fans are not usually applied in connection with piping systems because they are not efficient where a large component of the pressure is static.

Capacities are therefore measured with fan discharging into a plenum space, the maintained resistance being the static pressure in that space.

## **STURTEVANT-BLACKMAN PROPELLER FAN**

### **SPECIFICATIONS**

We recommend the use of the specifications on Sturtevant Propeller Fans given on page 808. Propeller Fans of the Blackman type are built by this company only when ordered or to meet specifications. The demand for them, however, is decreasing since they are less efficient, of smaller volumetric capacity, and make more noise than Sturtevant Propeller Fans. For these reasons we strongly advise the use of the latter type.

## **Sturtevant-Blackman Propeller Fan**

### **EXPLANATION OF TABLES**

These fans are not usually applied in connection with piping systems because they are not efficient where a large component of the pressure is static.

Capacities are therefore measured with fan discharging into a plenum space, the maintained resistance being the static pressure in that space.

## 54" Sturtevant-Blackman Propeller Fan

When Discharging Air at 65° F and Density .075 lbs. per cubic foot Against Continuously Maintained Room Resistances.  
Volumes Measured by Anemometer Through Rectangular Opening in Wall. Co-efficient .82

Sturtevant-Davidson Propeller Fan

## **STURTEVANT-DAVIDSON PROPELLER FAN**

### **SPECIFICATIONS**

See specifications on page 808. Sturtevant Propeller Fans of the Davidson type are less efficient and more noisy than the standard Sturtevant Propeller Fan described on pages 805-821, and the demand for the Davidson type has therefore decreased. On special order or to meet specifications Sturtevant-Davidson Propeller Fans will be furnished, but the other type is recommended.

## **Sturtevant-Davidson Propeller Fan**

### **EXPLANATION OF TABLES**

These fans are not usually applied in connection with piping systems because they are not efficient where a large component of the pressure is static.

Capacities are therefore measured with fan discharging into a plenum space, the maintained resistance being the static pressure in that space.

# 120" Sturtevant-Davidson Propeller Fan

When Discharging Air at 65° F and Density .075 lbs. per cubic foot Against Continuously Maintained Room Resistances.  
 Volumes Measured by Anemometer Through Rectangular Opening in Wall. Co-efficient .82

# **STURTEVANT TRACTRIX FANS**

**Dimensions, Capacities, Horse Powers**

## Sturtevant Tractrix Fans

Sturtevant Tractrix Fans

# **STURTEVANT TRACTRIX FAN**

## **SPECIFICATIONS**

There shall be furnished a Sturtevant No. ....Tractrix Fan, the total length in the direction of the shaft being.....inches, and the total overall diameter.....inches.

The fan shall have a capacity of.....cubic feet per minute and shall operate at approximately.....R.P.M. requiring approximately .....B.H.P.

The electric motor shall be built to operate on.....current,.....volts,.....cycles, .....phase.

## **Tractrix Fan**

### **EXPLANATION OF TABLES**

These fans are not usually applied in connection with piping systems because they are not efficient where a large component of the pressure is static.

Capacities are therefore measured with fan discharging into a plenum space, the maintained resistance being the static pressure in that space.

## Sturtevant Disc Fan—Design 1

Sturtevant Disc Fan

## **DISC FAN — DESIGN 1**

### **SPECIFICATIONS**

There shall be furnished a Sturtevant.....  
inch Design 1 Disc Fan, the wheel having  
.....blades firmly fixed to radial steel  
arms cast into the hub. The casing shall be  
of No.....gauge sheet steel suitably sup-  
ported by angle irons placed around both the  
inlet and delivery sides of the casing. Re-  
movable feet shall be bolted to the casing.

The fan shall have a capacity of.....cubic  
feet per minute and shall operate at approx-  
imately.....R. P. M., requiring approx-  
imately.....B. H. P.

## **Sturtevant Disc Fan—Design 1**

### **EXPLANATION OF TABLES**

These fans are not usually applied in connection with piping systems because they are not efficient where a large component of the pressure is static.

Capacities are therefore measured with fan discharging into a plenum space, the maintained resistance being the static pressure in that space.

# **STURTEVANT DISC FANS**

## **Design 2**

**Dimensions, Capacities, Horse Powers**

## Sturtevant Disc Fan—Design 2

Sturtevant Disc Fan—Design 2

## DISC FAN — DESIGN 2

### SPECIFICATIONS

There shall be furnished a Sturtevant.....  
Design 2 Disc Fan having a capacity of.....  
cubic feet per minute against a resistance of  
.....inches water gauge and shall operate at  
approximately.....R. P. M., requiring ap-  
proximately.....B. H. P.

The wheel shall have 12 floats, firmly riveted to  
the hub. To give additional strength, sizes 42-inch  
and larger shall have each float braced with sup-  
ports extending from a special ring on the hub to  
a point near the outer end of the float.

The casing shall consist of steel plate of.....  
gauge suitably supported with angle irons on both  
inlet and outlet sides. Removable feet shall be  
bolted to the fan casing.

## **Sturtevant Disc Fan—Design 2**

### **EXPLANATION OF TABLES**

These fans are not usually applied in connection with piping systems because they are not efficient where a large component of the pressure is static.

Capacities are therefore measured with fan discharging into a plenum space, the maintained resistance being the static pressure in that space.

|  |                               |        |       |     |    |      |                       |

Note: Dotted lines at left of casing show location of additional header and piping, for double group heaters. Dimension "A" is length of air space.

"Single" means that heater is one section wide.

"Double" or "Double Group" means that heater is of double width and has two sections placed back-to-back.

|                 | 9-0                    | 33                              | 36     |        |    |        | 120 |              |

Note: Dotted lines at left of casing show location of additional header and piping for double group heaters.  
 Dimension "A" is length of air space.  
 "Single" means that heater is one section wide.  
 "Double" or "Double Group" means that heater is of double width and has two sections placed back-to-back.

Note: Dotted lines outside of casing show location of additional piping for double group of heaters.

Dimension "A" is length of air space.

"Single" means that heater has a width of one section.

"Double Group" means that heater is of double width having two sections placed back-to-back.

NOTE: Dotted lines at left of casing show location of additional headers and piping for double group heaters.  
 Dimension "A" is length of air space.  
 "Single" means that heater consists of a single section. "Double" means that heater is of double width, having two sections placed back-to-back.

# Sturtevant Heaters — Return Bend Type

|                                    | 7 9                     | 349                            | 1013                           | 2139                        | 31.34                                 |                                   |                         |                                |                                |                             |                                       |

1. All sections contain four rows.

2. The overall height of a heater above the bottom of the base is determined by adding to the nominal height of pipes one of the following constants:

For sizes Nos. 12, 15 and 18 add 8 5/8 inches.

For sizes Nos. 22, 25 and 28 add 9 3/8 inches.

For sizes Nos. 31 and 36 add 9 7/8 inches.

For size No. 40 add 10 1/4 inches.

This additional height is due to the space occupied by the base and by the elbow at the top.

Note:—Free Area is approximately 9% of heating surface. The percentage varies slightly for every heater.

These notes also refer to continuation of this table at top of following page.

# Sturtevant Heaters

## (All Types Except Return Bend)

**Steam Pressure**  
0 Pounds Gauge

**Final Temperatures and Condensations**

**Steam Temperature**  
212° F.

\* Final temperature of air leaving heater.

† Condensation in pounds per square foot of heating surface per hour.

# Sturtevant Heaters

## (All Types Except Return Bend)

**Steam Pressure**  
5 Pounds Gauge

**Final Temperatures and Condensations**

**Steam Temperature**  
227° F.

\* Final temperature of air leaving heater.

† Condensation in pounds per square foot of heating surface per hour.

# Sturtevant Heaters (All Types Except Return Bend)

**Steam Pressure**  
**20 Pounds Gauge**

**Final Temperatures and Condensations**

**Steam Temperature**  
**259° F.**

\* Final temperature of air leaving heater.

† Condensation in pounds per square foot of heating surface per hour.

# Sturtevant Heaters (All Types Except Return Bend)

**Steam Pressure**  
40 Pounds Gauge

**Final Temperatures and Condensations**

**Steam Temperature**  
287° F.

\* Final temperature of air leaving heater.

† Condensation in pounds per square foot of heating surface per hour.

# Sturtevant Heaters—Return Bend Type

Final Temperatures and Condensations

Steam Pressure  
5 Pounds Gauge

Steam Temperature  
227° F.

\* Final temperature of air leaving heater.

† Condensation in pounds per square foot of heating surface per hour.

# Sturtevant Heaters—Return Bend Type

## Final Temperatures and Condensations

Steam Pressure  
10 Pounds Gauge

Steam Temperature  
240° F.

\* Final temperature of air leaving heater.

† Condensation in pounds per square foot of heating surface per hour.

# Sturtevant Heaters—Return Bend Type

## Final Temperatures and Condensations

Steam Pressure  
40 Pounds Gauge

Steam Temperature  
287° F.

Final temperature of air leaving heater.

† Condensation in pounds per square foot of heating surface per hour.

# Sturtevant Heaters—Return Bend Type

## Final Temperatures and Condensations

Steam Pressure  
80 Pounds Gauge

Steam Temperature  
324° F.

# **STURTEVANT AIR WASHERS**

## **Types "H," "C" and "S"**

**Dimensions — Capacities**

## Sturtevant Air Washer—Type "H"

Sturtevant Type "H" Air Washer

# STURTEVANT AIR WASHER—TYPE "H"

## SPECIFICATIONS

**General.** There shall be furnished a ..... by ..... size, type "H" Sturtevant Air Washer. The width of the washer shall be ..... feet ..... inches by a height ..... feet ..... inches. The length of the washer in direction of flow of air shall be 7 feet 0 inches.

The air washer shall have a capacity of ..... cubic feet of air per minute at a velocity of ..... feet per minute.

**Tank.** The tank shall be constructed of galvanized steel firmly braced and riveted to a rigid frame of galvanized angle irons. The plates of the tank shall be of No. 14 gauge, the angle irons shall be  $1\frac{1}{2}$ " by  $1\frac{1}{2}$ " by 3-16", and shall be spaced not more than 3 feet apart. The top framing angles are to be punched 5" on centers for 3-8" bolts to secure the casing of the spray chamber to the tank. All rivet heads and seams shall be soldered over to make the tank watertight. The tank shall be fitted with a conical shaped overflow and trap which shall carry away the surplus water. The trap shall be provided to prevent the admission of sewer gas from the drain to the spray chamber.

**Casing.** The casing of the washer shall be made of No. 18 galvanized steel thoroughly braced with  $1\frac{1}{2}$ " by  $1\frac{1}{2}$ " by 3-16" galvanized angle irons, spaced not more than 3 feet on centers. The seams and rivet heads are to be soldered so as to make the casing watertight. The casing shall be fitted with a 18" x 30" hinged door for access to spray chamber. This door shall consist of a rigid cast iron frame fitted with three glass panels. The door shall be hung on heavy hinges and shall clamp against a heavy rubber gasket inserted in the frame that carries the door. To make the door watertight, it shall be provided with six latches operating with a cam motion. The frame shall be arranged to collect any water that may drip from the door, and return same to tank, should the door be left unclamped.

**Eliminators.** There shall be provided eliminator plates to remove the entrained moisture from the air after it has passed through the spray chamber. These eliminators shall be of the horizontal cut-lip type, arranged in tiers of not more than five foot widths. The plates shall be not lighter than 22 gauge steel and shall be galvanized after they have been cut and formed to shape. The plates are to be so arranged that a large part of the surface will become a washing surface for the removal of dust that impinges upon them. The eliminators shall consist of one group in the direction of the flow of air and be so arranged that the passage way between two plates shall be continuous.

**Spray Device.** The spray device shall consist of a horizontal header placed across the bottom of the spray chamber and fitted with vertical risers so placed as to bring the spray nozzles, secured to the risers, in a plane parallel to and at a distance of 48" in front of the eliminators. The upper ends of the risers shall be capped with a special cap that will permit fastening to a galvanized angle iron across the top of the spray chamber, thus holding the risers securely in line. There shall be not less than one atomizing nozzle for each 400 cubic feet of air washed per minute. The nozzles shall be constructed entirely of bronze and shall have large water ways to prevent clogging of the nozzles by sediment carried in the water. The nozzle openings shall be not less than 3-16" in diameter, and shall discharge not more than  $1\frac{1}{4}$  gals. per minute with 19 pounds pressure per square inch. All piping and fittings shall be heavily galvanized. For washers of 8' height and under, 1" risers shall be used; for washers over 8' in height,  $1\frac{1}{4}$ " risers shall be used.

**In addition** to the atomizing nozzles, there shall be furnished a spray pipe across the top of the spray chamber adjacent to the eliminator plates. These nozzles shall be of the rain-spray type, shall be placed 6" on centers and shall have capacity to wash each foot of width of the eliminators with not less than five gallons of water per minute.

**Strainer.** The straining device shall consist of a compartment extending the full width of the tank and shall be fitted with fine mesh copper wire screens arranged for easy removal for cleaning. There shall be two square feet of strainer area for each foot in width of the tank. The top of the compartment shall be closed with hinged doors to prevent dirt washed from the air falling into it.

**Diffuser Plates.** Across the front of the spray chamber shall be placed a series of louvre like diffuser plates to eliminate eddy currents and to prevent back splash of the spray washer. The washer shall be so designed that when the fan is not in operation, the spray water will be entirely retained within the spray chamber when the pump is running.

**Pump and Motor.** For recirculating the spray water, there shall be furnished a ..... centrifugal pump of the double suction, split casing type. The pump to be furnished with a bronze impeller, bronze covered steel shaft and bronze bushings. The bearings shall be of the ring oiling type. Heavy cast-iron base shall be furnished upon which to mount the pump and motor. An oil groove shall extend completely around the cast-iron base. The pump will be driven by the motor through an insulated flexible coupling.

The motor shall be of ..... horse power, capacity at ..... R.P.M. and designed to operate on current of the following characteristics:.....

**Accessories.** Where necessary a suitable starter will be furnished with the motor.

A 5" diameter pressure gauge, with white dial and black figures reading to thirty pounds shall be furnished with the washer.

A bronze float for maintaining constant water level in the tank will be furnished with the washer.

The casing shall be fitted with a water-proof marine type fixture ready to receive the electric bulb to be furnished by others.

**Note.** Pipe connections will be fitted to the washers for connecting the pump suction and discharge to the strainer compartment and to the spray headers respectively. The contractor is to furnish between the washer and pump galvanized piping in accordance with the washer manufacturer's drawings.

# STURTEVANT AIR WASHER—TYPE “H”

## EXPLANATION OF SPECIFICATION REQUIREMENTS

**Length of Washer.** For the most efficient humidifying and cooling service, an air washer must be so designed that the air and water will be in intimate contact for a considerable period of time. To accomplish this, in the Sturtevant Type “H” Air Washer, the spray chamber is over five feet long. The nozzles are over four feet from the eliminators and the total length of the washer is seven feet.

**Tank.** The tank of the Sturtevant Washer is constructed of No. 14 gauge metal, which is heavier than the tanks of the washers manufactured by most companies. Experience has proved that the tank should be constructed in an exceptionally rigid manner as it is usually required to contain several thousand pounds of water and in addition to support the chamber of the spray casing.

**Trap.** The running trap inserted in the overflow of the Sturtevant Air Washer tank completely eliminates any possibility of the fan sucking odors and gases from the drain pipe.

**Inspection Door.** The cast-iron door with glass panels fitted to the casing, is of ample size to permit easy access to the spray chamber. The rigid form prevents warping and eliminates the cracking of the glass. The heavy hinges assure that breakage will not occur from slamming of the door or from abuse.

**Eliminators.** The projecting lips of the horizontal lip perforated baffles or eliminators cut the air into many streams bringing all the air into contact with the wet surfaces upon which the dirt in the air is deposited. The open construction of these baffle plates causes them to be continually washed clean and drained.

**Spray Device.** The spray device of the Sturtevant Type “H” Washer consists of not less than one nozzle for every 400 cubic feet of air washed per minute. This guarantees that the spray chamber is filled with a uniform dense spray and assures the thorough wetting of the air. The washing of the eliminators by supplementary nozzles makes certain that the surfaces will be continually wet to cause the adherence of the dust particles.

**Pump.** The recirculating pump is of the double suction enclosed impeller type. It is bronze fitted throughout to give the maximum service and wear. The split casing permits the removal of bearings, shaft or impeller without disturbing the water connection. These pumps are especially rigid and assure permanent alignment and proper operation.

**Lighting Fixture.** The water proof marine type electric fixture insures that the interior of the washer is properly lighted at all times making the inspection easy and thorough.

# Sturtevant Air Washer—Type "H"

## DIMENSIONS

Dimensions B and D are given in third and fourth columns of table on opposite page.

If the pump is placed as indicated above, the additional width required for the pump\* and piping is as follows:

| PUMP DISCHARGE* | MINIMUM ADDITIONAL WIDTH |
|-----------------|--------------------------|
| 1 1/2"          | 2'-6"                    |
| 2"              | 3'-0"                    |
| 2 1/2"          | 3'-6"                    |
| 3"              | 4'-0"                    |
| 4"              | 4'-6"                    |
| 5"              | 5'-0"                    |

\*The size of pump necessary for any size of air washer is given in column 5 of table on opposite page.

---

## Sturtevant Air Washer—Type “C”

---

- Sturtevant Type “C” Air Washer with Side and Baffles Removed. Type “H” Air Washer is the same except that it has only one set of spray pipes and one door

# STURTEVANT AIR WASHER—TYPE "C"

## SPECIFICATIONS

**General.** There shall be furnished a . . . . by . . . . size Type "C" Sturtevant Air Washer. The width of the washer shall be . . . . feet . . . . inches by a height . . . . feet . . . . inches. The length of the washer in direction of flow of air shall be 9 feet 0 inches.

The air washer shall have a capacity of . . . . cubic feet of air per minute at a velocity of . . . . feet per minute.

**Tank.** The tank shall be constructed of galvanized steel firmly braced and riveted to a rigid frame of galvanized angle irons. The plates of the tank shall be of No. 14 gauge, the angle irons shall be  $1\frac{1}{2}$ " by  $1\frac{1}{2}$ " by 3-16" and shall be spaced not more than three feet apart. The top framing angles are to be punched 5" on centers for 3-8" bolts to secure the casing of the spray chamber to the tank. All rivet heads and seams shall be soldered over to make the tank water tight. The tank shall be fitted with a conical shaped overflow and trap which shall carry away the surplus water. The trap shall be provided to prevent the admission of sewer gas from the drain to the spray chamber.

**Casing.** The casing of the washer shall be made of No. 18 galvanized steel thoroughly braced with  $1\frac{1}{2}$ " by  $1\frac{1}{2}$ " by 3-16" galvanized angle irons, spaced not more than three feet on centers. The seams and rivet heads are to be soldered so as to make the casing watertight. The casing shall be fitted with two 18" x 30" hinged doors for access to the spray chamber. The doors shall consist of a rigid cast-iron frame fitted with three glass panels and shall be hung on heavy hinges and shall clamp against a heavy rubber gasket inserted in the frame that carries the door. To make the doors watertight, they shall each be provided with six latches operating with a cam motion. The frames shall be arranged to collect any water that may drip from the doors, and return same to tank, should the doors be left unclamped.

**Eliminators.** There shall be provided eliminator plates to remove the entrained moisture from the air after it has passed through the spray chamber. These eliminators shall be of the horizontal cut-lip type, arranged in tiers of not more than five foot widths. The plates shall not be lighter than No. 22 gauge steel and shall be galvanized after they have been cut and formed to shape. The plates are to be so arranged that a large part of the surface will become a washing surface for the removal of dust that impinges upon them. The eliminators shall consist of one group in the direction of the flow of air and be so arranged that the passage way between two plates shall be continuous.

**Spray Device.** The spray device shall consist of two horizontal headers placed across the bottom of the spray chamber and fitted with vertical risers so placed as to bring the spray nozzles, secured to the risers, in planes parallel to and at distances of 39" and 75" in front of the eliminators respectively. The upper ends of the risers shall be capped with a special cap that will permit fastening to a galvanized angle iron across the top of the spray chamber, thus holding the risers securely in line. There shall be not less than one atomizing nozzle for each 200 feet of cubic air washed per minute. The nozzles shall be constructed entirely of bronze and shall have large waterways to prevent clogging of the nozzles by sediment carried in the water. The nozzle openings shall be not less than 3-16" in diameter, and shall discharge not more than  $1\frac{1}{4}$  gallons per minute with 19 pounds pressure per square inch. All piping and fittings shall be heavily galvanized. For washers of 8' height and under, 1" risers shall be used; for washers over 8' in height,  $1\frac{1}{4}$ " risers shall be used. In addition to the atomizing nozzles, there shall be furnished a spray pipe across the top of the spray chamber ad-

ja-cent to the eliminator plates. These nozzles shall be of the rain-spray type, shall be placed 6" on centers and shall have capacity to wash each foot of width of the eliminators with not less than five gallons of water per minute.

**Strainer.** The straining device shall consist of a compartment extending the full width of the tank and shall be fitted with fine mesh copper wire screens arranged for easy removal for cleaning. There shall be two square feet of strainer area for each foot in width of the tank. The top of the compartment shall be closed with hinged doors to prevent dirt washed from the air falling into it.

**Diffuser Plates.** Across the front of the spray chamber shall be placed a series of louvre like diffuser plates to eliminate eddy currents and to prevent back splash of the spray washer. The washer shall be so designed that when the fan is not in operation, the spray water will be entirely retained within the spray chamber when the pump is running.

**Pump and Motor.** For recirculating the spray water there shall be furnished a .....centrifugal pump of the double suction, split casing type. The pump to be furnished with a bronze impeller, bronze covered steel shaft and bronze bushings. The bearings shall be of the ring oiling type. Heavy cast-iron base shall be furnished upon which to mount the pump and motor. An oil groove shall extend completely around the cast-iron base. The pump will be driven by the motor through an insulated flexible coupling.

The motor shall be of ..... horse power, capacity at ..... R.P.M. and designed to operate on a current of the following characteristics:.....

**Accessories.** Where necessary a suitable starter shall be furnished with the motor.

A 5" diameter pressure gauge, with white dial and black figures reading to thirty pounds shall be furnished with the washer.

A bronze float for maintaining constant water level in the tank will be furnished with the washer.

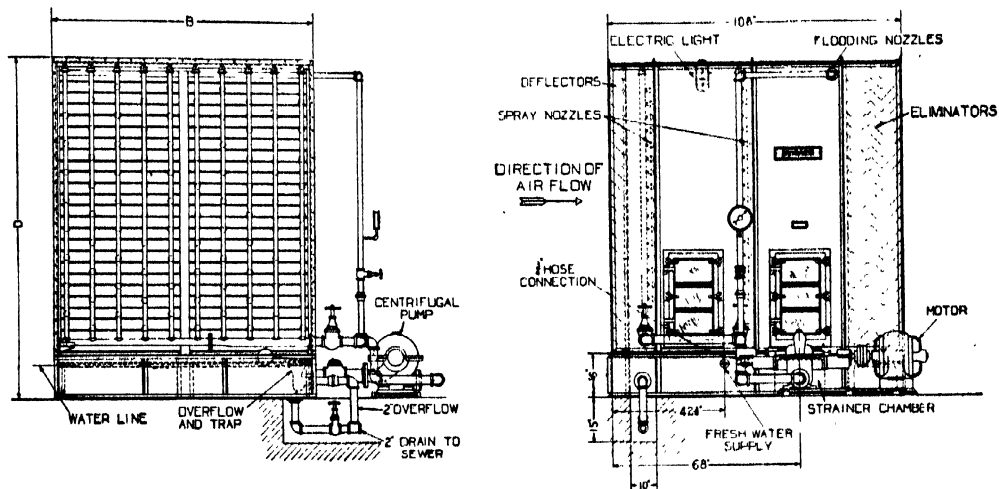

The casing shall be fitted with a water-proof marine type fixture ready to receive the electric bulb to be furnished by others.

**Note.** Pipe connections will be fitted to the washers for connecting the pump suction and discharge to the strainer compartment and to the spray headers respectively. The contractor is to furnish between the washer and pump, galvanized piping in accordance with the washer manufacturer's drawings.

# Sturtevant Air Washer—Type "C"

## DIMENSIONS

Dimensions B and D are given in third and fourth columns of table on opposite page.

If the pump is installed in the location indicated above, the additional width of floor space required for pump\* and piping is as follows:

| PUMP DISCHARGE* | MINIMUM ADDITIONAL WIDTH |
|-----------------|--------------------------|
| 1½"             | 2'-6"                    |
| 2"              | 3'-0"                    |
| 2½"             | 3'-6"                    |
| 3"              | 4'-0"                    |
| 4"              | 4'-6"                    |
| 5"              | 5'-0"                    |
| 6"              | 5'-6"                    |

\*The size of pump necessary for any air washer is given in column 5 of table on opposite page.

## Sturtevant Air Washer—Type "S"

Sturtevant Type "S" Air Washer

# STURTEVANT AIR WASHER—TYPE "S"

## SPECIFICATIONS

**General.** There shall be furnished a . . . . by . . . . size Type "S" Sturtevant Air Washer. The width of the washer shall be . . . . feet . . . . inches; the height shall be . . . . feet . . . . inches. The washer shall be 4' 0" long in the direction of the flow of air. The air washer shall have a capacity of . . . . cubic feet of air per minute at a velocity of . . . . feet per minute.

**Tank.** The tank shall be constructed of galvanized steel firmly braced to a rigid frame of galvanized angle iron. The plates of the tank shall be of No. 14 guage; the angles shall be  $1\frac{1}{2}$ " x  $1\frac{1}{2}$ " x 3-16" and shall be spaced not more than three feet apart. The top framing angles are to be punched 5" on centers for 3-8" bolts to secure the spray chamber casing to the tank. All rivet heads and seams shall be soldered over to make the tank water tight. The tank shall be fitted with a conical shaped overflow and trap to carry away surplus water. The trap shall be provided to prevent the admission of sewer gas from the drain pipe to the spray chamber.

**Casing.** The casing of the washer shall be made of galvanized steel of No. 18 guage, and thoroughly braced with  $1\frac{1}{2}$ " x  $1\frac{1}{2}$ " x 3-16" galvanized angles, spaced not more than three feet apart. All rivet heads and seams shall be soldered to make the casing water tight. A water tight window shall be set in the casing to permit inspection of the spray chamber.

**Eliminators.** There shall be provided eliminators to remove the entrained moisture from the air after it has passed through the spray chamber. The eliminators shall be of the horizontal cut-lip type, arranged in tiers of not more than five foot widths. The plates shall not be lighter than No. 22 gauge steel and they shall be galvanized after the plates have been cut and formed to shape. It shall be arranged so that a large part of the surface of the plates shall act as a washing surface for the removal of dust that impinges upon the plates. The eliminators shall consist of one group in the direction of the flow of air.

**Spray Device.** The spray device shall consist of a loop formed of two pipes into which are secured the spray nozzles. This loop shall be connected at both ends to the discharge line from the recirculating pump. One row of spray nozzles shall be arranged to direct the spray on to the eliminators for the purpose of washing to the tank any dirt adhering to the plates. The nozzles shall be of brass or bronze composition and shall have not less than a 3-16" orifice. The spacing of the nozzles shall not be more than 6" center to center. The orifice of the nozzle shall be unobstructed, except for an overhanging deflector for breaking the water into fine spray. Each nozzle shall discharge approximately 3 gallons of water per minute with 12 pounds pressure.

**Strainer.** A double cylindrical brass strainer shall be fitted to the tank to prevent matter liable to clog the water passages entering the system. The screens shall consist of perforated brass sheets with the perforations of the outer sheet 1-10" diameter and those of the inner 1-16" diameter. The screens shall be riveted to frames of non-corroding metal. One frame shall be secured to the pump suction connection; while the other shall be fitted with a hinged door. The strainer shall be easily removable for cleaning and shall not require the use of bolts or clamp to secure it in place.

**Pump and Motor.** For recirculating the spray water there shall be furnished with the air washer a centrifugal pump, bronze fitted and mounted on an extended base upon which will be mounted the electric motor which shall drive the pump through a

flexible coupling. The motor shall be of ..... horse power, at ..... R.P.M. and shall be designed to operate on a current of the following characteristics:.....

.....  
.....

**Accessories.** Where necessary a suitable starter shall be furnished with the motor. A 5" diameter pressure gauge, with white dial and black figures reading to thirty pounds shall be furnished with the washer. A bronze float valve for maintaining constant water level in the tank shall be furnished with the washer. The casing shall be fitted with a water-proof marine type fixture ready to receive the electric bulb to be furnished by others.

**Note.** Pipe connections shall be fitted to the washer for connecting the pump suction and discharge to the strainers and to the spray device. The contractor is to furnish between the washer and pump galvanized piping in accordance with the washer manufacturer's drawings.

# Sturtevant Air Washer—Type "S"

## DIMENSIONS

Dimensions B and D are given in third and fourth columns of table on previous page.

If the pump is installed in the location indicated above, the additional width of floor space required for pump\* and piping is as follows:

| PUMP DISCHARGE* | MINIMUM ADDITIONAL WIDTH |
|-----------------|--------------------------|
| 1½"             | 2'-6"                    |
| 2"              | 3'-0"                    |
| 2½"             | 3'-6"                    |
| 3"              | 4'-0"                    |
| 4"              | 4'-6"                    |
| 5"              | 5'-0"                    |
| 6"              | 5'-6"                    |

\* The size of pump necessary for any air washer is given in column 5 of table on previous page.
